BALANCE OF PLANT CONTINUITY PLAN

PRIORITY ISSUE: MULTIPLE & VARIED TASKS

Offshore wind farm developers and owners face a multitude of tasks, which original equipment manufacturers (OEM) will not typically take on. This long list of tasks is routinely undertaken by a plethora of contractors, increasing work load, risk and costs for developers and owners alike.

SUPPORTING YOUR SUCCESS

CWind combines all these services required during construction, many of which continue to play a key role during O&M. Reduce your contractual complexities and relieve staff workloads by grouping all these needs into a single contractual agreement thereby minimising risk.

EVERYTHING YOU'LL NEED FROM ONE SOURCE

CWind provides all the elements you need to complement your OEM component contracts. Logistics, turbine, cable, substation and foundation maintenance in one bespoke solution to match your requirements.

- A fleet of multi-purpose CTVs transports technicians safely & comfortably
- Painting, inspection, certification & marine growth removal
- A pool of qualified turbine technicians to boost or augment your teams
- Tower teams & ROVs for cable pull-ins in construction & repair
- Mechanical & electrical substation services, inspection, testing & certification, repair & corrosion protection
