# COMMISSIONING ACCELERATOR

## **PRIORITY ISSUE:** **DEALING WITH SURPRISES**

The construction of an offshore wind farm is the most expensive part of its lifecycle and subject to tight timelines. The aim is the delivery of a fully operational, issue-free wind farm, capable of delivering energy to the grid and to specification. Surprises are costly and may ultimately delay delivery.

## **SUPPORTING YOUR SUCCESS**

CWind's Commissioning Accelerator addresses these risks by combining the services to manage those surprises, optimise and accelerate project delivery. We help you reduce the time, cost and additional effort required to have your assets generating power as soon as possible.

## **EVERYTHING YOU'LL NEED FROM ONE SOURCE**

Benefit from our tailored approach, avoid multiple contracts, reduce delays and minimise CAPEX, allowing you to focus on successfully managing your project.

- Electrical/mechanical turbine completion, testing, commissioning, by competent & experienced technicians
- Substantial fleet of wind farm support vessels, large & flexible payload
- Experienced tower teams for export & array cable pull-ins & repairs, ROV/AUV subsea cable surveys
- Foundation teams for inspections (structural, lifting, climbing & safety equipment), corrosion protection, removal of marine growth
